Small PDF Test Document

Introduction

This is a small PDF document (< 1MB) created for testing the RAG system's document ingestion capabilities. It contains basic text content across multiple paragraphs.

Section 1: Document Processing

PDF documents are widely used for sharing formatted documents. This test file verifies that the system can correctly extract text from PDF files and index them for retrieval.

Section 2: Key Features

• Text extraction from PDF format
• Proper handling of formatting
• Support for multi-page documents
• Accurate content indexing

Section 3: Testing Objectives

The primary objective of this document is to ensure that small PDF files are processed correctly by the document parser service. It should be successfully ingested, chunked, and made available for semantic search.

Conclusion

This small PDF serves as a baseline test case for PDF document processing.
